## FURTHER PERIODICALS OF THE WROCLAW TECHNICAL UNIVERSITY

*Papers on Science of Science and Forecasting* do not only discuss theoretical problems but they also provide solutions to be applied in practice. In addition to original extensive research papers, review communications and reports from conferences sponsored by Polish and foreign research centres are presented.

*Optica Applicata* contains extensive research papers: the diffraction theory, quantum optics, holography, scientific photography, technology of manufacturing optical elements, optoelectronics, colorimetry etc.

*Studia Geotechnica* is a unique magazine in Poland entirely devoted to theoretical and experimental problems of engineering sciences on soils and rocks.

*Materials Science* includes papers dealing with electronic and molecular structure of chemical compounds and materials as well as the properties of semi-conductors, cryogenics, electronic and nuclear resonance etc.

*Systems Science*. The papers published in the periodical are devoted to a general theory of systems, their mathematical models as well as science, biology and other disciplines.

*Acta Polytechnicae Wratislaviensis* published in two Polish and English versions are issued twice a year. They contain the abstracts (analytical bibliography) of more important works performed at the Wrocław Technical University, either published in form of papers and communications or unpublished being destined for inner purposes.
